

SHIPPED · RUNNING IN PRODUCTION

547,529

lines of code across **10 systems**. Counted, not estimated.
Here is what that code actually runs.

Compliance and consent. Property and public records. Ops health.
Training. Every one of those is a module with its own name, doing one
job.

THE PART NOBODY POSTS ABOUT

Only a third of it is the features.

Where all 547,529 lines actually go.

43% of it is plumbing. Validation at the boundaries. Retries. Logging the payload that got rejected, not just that something was. The step that can re-run alone.

None of it is clever. All of it is the difference between a demo and something a business can actually run on.
