

BUILD IN PUBLIC

How I built a video studio for \$0.

No crew, no cameras, no stock footage —
just code (and a bit of AI). Here's how. →

02

STEP 1

The art: drawn by code.

Instead of hiring illustrators, a script draws every character and scene. Same style every time — and I can change it in seconds.

- ▶ the mascot, the cast, the villains
- ▶ recolored instantly
- ▶ never off-brand

03

STEP 2

The music: made by code.

A little program writes the soundtrack — original, owned, zero licensing headaches. (Only the voiceover uses a paid AI.)

- ▶ no stock-music fees
- ▶ no copyright strikes

04

STEP 3

The video: filled in like a form.

The hard part — the animation engine — is built once. After that, a new video is just filling in the words and the character. Not a week of work.

- ▶ the 100th video is as easy as the 1st
- ▶ consistent every time

05

THE RESULT

21

videos, one command

7 ideas × 3 shapes (for TikTok, YouTube, and feeds), made in a single batch.

06

STEP 4

Then it cuts itself for every platform.

One video becomes the right size, a matching thumbnail, and a ready-to-post caption for every network — automatically.

- ▶ YouTube, TikTok/Reels, X
- ▶ designed covers, not blurry screenshots

THE POINT

I build the machine, not just the video.

That's the difference between one asset
and a system that keeps producing —
and it's the same way I'd build for you.
