

THE NEW MATH OF BUILDING

How one person ships like a team.

Not 80-hour weeks. A system. Here's how
it works. →

02

THE SHIFT

AI replaced the team, not the builder.

One person can now do the work of a whole department — the trick is knowing which calls the machine still can't make for you.

- ▶ a roster of AI 'specialists' for each job
- ▶ the studio AND the dev team — one person

03

THE METHOD

Every job runs the same playbook.

Look it up → reuse what already works → build → double-check it → save the lesson. Nothing gets built twice.

- ▶ reuse before rebuilding
- ▶ a hard check before anything ships
- ▶ every lesson banked for next time

04

THE TRUST PART

Nothing goes out unchecked.

Every claim is backed by a real source; every decision is written down. So even a non-technical founder can trust what got built.

- ▶ sources, not vibes
- ▶ a written record of every call

05

THE BAR

The quality bar doesn't drop.

Real, ready-for-users work from day one — not a throwaway prototype you have to rebuild later.

- ▶ 1,200+ automated checks
- ▶ safety built in before the first user
- ▶ updates that don't take the app down

THE POINT

Judgment is the new bottleneck.

The machine does the volume; knowing what it can't do for you is the job. That's what you're actually hiring.
